Life Beyond the Ice

LSU Researchers Examine Organisms' Ability to Repair Their Own DNA

Associate Professor of Biological Sciences Brent Christner and his colleagues have observed that while frozen, some single-celled organisms are capable of repairing their own DNA, even after exposure to doses of radiation that would prove fatal for a human being. The organisms, some of which are 30,000 years old, are stored in several hundred pounds of ice in a freezer of LSU's Life Sciences Building.

These findings are quite exciting especially for those studying the possibility of life on Mars. In an October 19 article published in *The Advocate*, Christner said it's not outlandish to assume that the same type of single-celled organisms that exist today in some of Earth's most extreme weather conditions could also exist on Mars — now a frigid planet with a surface temperature of about minus-50 degrees Celsius that is constantly being bombarded by cosmic radiation because of its thin atmosphere.

"It follows that if we are going to look for evidence of life on Mars, we shouldn't be looking for corpses," Christner said. "We should be looking for living organisms probably frozen and living beneath the planet's surface."

Discovery's Science Channel Films LSU Geologists for 'Strip the City' Series

A film crew with Discovery Communications' Science Channel filmed Sam Bentley, Billy and Ann Harrison Chair in Sedimentary Geology and director of the LSU Coastal Studies Institute, and his research team as part of the channel's popular "Strip the City" series. In this episode, the show will examine the constraints imposed by geology on the engineering of buildings and infrastructure in New Orleans.

During the taping, Bentley along with Kevin Xu from the LSU Department of Oceanography and Coastal Sciences and doctoral students Kevin Obelcz (oceanography and coastal sciences), Crawford White (geology), Jill Banks (geology), and Greg Keller (geology), collected a 20 foot vibracore then split and studied the core to answer questions about the history and geology of the area.

The episode will air in January or February. We will keep you posted on the air date.

LSU Superfund Research Center Holds Annual Meeting in Baton Rouge

The LSU Superfund Research Program (SRP) hosted the annual SRP meeting in Baton Rouge, October 15-17. More than 200 attended the meeting, which brought together researchers, trainees, and administrators supported by superfund programs at the University of Arizona, Boston University, Harvard, Brown, Duke, Michigan State, and other institutions. Participants also included representatives from partner agencies such as the U.S. Environmental Protection Agency and the Agency for Toxic Substances and Disease Registry. Conference sessions focused on topics such as emerging contaminants and pollutant mixtures, environmental and health effects of halogenated pollutants, and arsenic and heavy metals. The event also included a poster presentation session for graduate students.

Physics Department to Host 2014 Women in Physics Conference

The LSU Department of Physics & Astronomy will host the 2014 Conference for Undergraduate Women in Physics, January 17 - 19. The conference will highlight career opportunities for physicists. Conference activities include tours of national laboratories, research presentations, discussion panels and networking opportunities. Discussion panel topics will include applying for and succeeding in graduate school, how to get involved in undergraduate research, and the diversity of careers available to physicists.

The conference is one of eight conferences occurring simultaneously and organized through the American Physical Society.

LSU Community Celebrates Fall Fest 2013

LSU held its 19th annual Fall Fest celebration on October 11. Fall Fest is the chancellor's official "Welcome" for new students, faculty, and staff and a "Welcome Back" for returning LSU family members. The Fest provides an opportunity for the LSU community to learn about different campus departments, enjoy free food and drinks, and celebrate the spirit of LSU.

KUDOS

LSU Physicist, LIGO Member Recognized for Achievements in Research and Scholarship

LSU's Office of Research & Economic Development presented Bradley Schaefer, professor of physics & astronomy, with the 2013 Distinguished Research Master Award. Schaefer has published more than 200 peer reviewed articles in prestigious journals, including eight in *Nature*. His research received international acclaim for his role in the Supernova Cosmology Project paper reporting the accelerated expansion of the universe due to a previously unknown form of energy now known as dark energy. The discovery received the 2011 Nobel Prize and Schaefer, who contributed to the discovery, was invited to the Nobel Prize Award ceremony in Stockholm, Sweden.

Sarah Caudill, was awarded the Alumni Association Distinguished Dissertation Award in Science, Engineering, and Technology, for her dissertation work which has led to the development of several approaches to detecting gravity waves. Such waves are predicted to occur as a consequence of highly energetic cosmic events, but are so weak at great distances that the waves have not yet been recognized. Caudill received a BS degree in physics from Stetson University and later moved to LSU to become a member of the international collaboration Laser Interferometer Gravitational-Wave Observatory. Her work has resulted in more than 27 publications with coauthors on the LIGO team.

NEW FUNDING

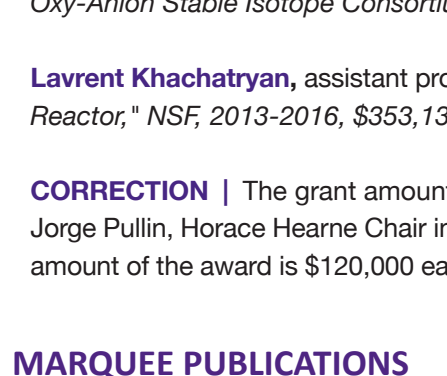

Vicente Secures More Than \$2 Million Grant to Expand Biomedical and Behavioral Sciences Research Program

Graca Vicente, Charles H. Barré Distinguished Professor of Chemistry, and director of the LSU Initiative for Maximizing Student Development (IMSD) Program, recently received more than \$2 million from the National Institute of General Medical Sciences (NIGMS) to fund phase three of the IMSD program. Supported since 2004, the program aims to enhance diversity in the biomedical and behavioral sciences by providing research, training, academic development, and career opportunities. NIGMS, one of the National Institutes of Health in the U.S. Department of Health and Human Services, has funded the program through 2018. Initial phases of the program focused on undergraduates, however, phase three expands the program to include graduate students.

One hundred percent of the scholars in the program are minorities, said Vicente. "We need a higher representation of minorities and underrepresented groups in research and leadership positions, and that is why this program is important."

LSU Professor Awarded Prestigious NSF Grant

Bret Elderd, LSU quantitative ecologist, has secured a five-year grant from the National Science Foundation's Ecology and Evolution of Infectious Diseases program to explore the complex connections among the baculovirus pathogen, its host and the ecological community that contains them.

Fortunately for humans, baculovirus infections don't pose a threat to any creature with a backbone. But as remote as this insect pathogen may seem, Elderd is uncovering deep mathematical patterns that undergird the spread of many infectious diseases. Elderd can use the same suite of equations to describe epidemics in insect populations and disease outbreaks in human populations.

Read *Epidemic Patterns* by Jenny Linscott

Huiming Bao, Charles L. Jones Professor of Geology & Geophysics, "Incorporation and Elimination of Molecular Oxygen Signal in Sulfate: Experiments and Modeling," NSF-EAR, 2013 - 2016, \$348,244 AND "Acquisition and Upgrade of Research Equipment at Oxy-Anion Stable Isotope Consortium at Louisiana State University," NSF-EAR, 2013-2014, \$375,439.

Laurent Khachatryan, assistant professor of chemistry, "Pyrolysis of Lignin for Bio-Oil Under CO2 Laser Irradiation in the "Wall-Less" Reactor," NSF, 2013-2016, \$353,137.

CORRECTION | The grant amount for "The Dynamics of Quantum Gravity: Symmetry Reduced Models," was NSF grant awarded to Jorge Pullin, Horace Hearne Chair in Theoretical Physics, was mistakenly listed at \$120,000 in last month's e-newsletter. The correct amount of the award is \$120,000 each year for three years.

MARQUEE PUBLICATIONS

The paper "Induced Plant Defenses, Host-Pathogen Interactions, and Forest Insect Outbreaks" by Bret Elderd, assistant professor of biological sciences, was published in the September 10 edition of the *Proceedings of the National Academy of Sciences (PNAS)*.

"Homological and Homotopical Dehn Functions are Different," by Pallavi Dani, assistant professor mathematics, and coauthors Aaron Abrams (Washington and Lee University), Noel Brady (University of Oklahoma), and Robert Young (University of Toronto) appeared in the October 15 edition of *PNAS*.

STAR SCHOLARS

Biological Sciences Major Crowned Homecoming Queen

Six Science Students Members of Homecoming Court

Students in the College of Science did not go unnoticed during this year's homecoming celebration. Emma Arceneaux, a senior majoring in biological sciences, took the field during the halftime of the Furman vs LSU game as she was crowned the 2013 homecoming queen.

"It was so incredible, I don't even have words to describe it," Arceneaux said. In addition to Arceneaux, there were five other science majors on the homecoming court this year including Sarah Beth Theriot, biological sciences; Tuan Tran, biological sciences with a double minor in psychology and chemistry; Sara Hazlewood, biological sciences; Mel Triay, a board certified anesthesiologist with 29 years experience; and Jim Lange, an accomplished research scientist with the Centers for Disease Control. The alumni discussed their careers, how they came to choose their fields of interest, and answered questions from the more than 40 Science Residential College students in attendance. The students also had an opportunity to network with the alumni one on one during dinner.

- Lee H. Meltzer Graduate Scholarship - \$3000
- Tara Jonell, PhD student
- George W. Schneider Sr. Memorial Scholarship - \$2500
- Kathryn Denomme, PhD Student

Jules & Olga Braunstein Memorial Scholarships:

- Senior Award - \$2500
- Matthew Smith
- Junior Award - \$2000
- James Emerson Smith IV

ALUMNI

Maud Walsh, professor of plant, environmental, and soil sciences and LSU Superfund Research Project research translation core leader, has been awarded the Louisiana Science Teachers' William Craig Outstanding University Educator Award. The award recognizes faculty who give back to their communities by reaching out to K-12 educators to help improve science education in the classroom. Walsh is a 1989 PhD graduate in geology.

DEVELOPMENT

College Hosts Dean's Circle Dinner

Nearly 100 alumni and friends of the College of Science filled the banquet Hall of Juban's Friday, October 11, for the seventh annual Dean's Circle (DC) Dinner. The event began with a student poster presentation during the cocktail hour, followed by a brief address by LSU Provost Stuart Bell. Interim Dean Guillermo Ferreyra welcomed the guests and acknowledged the DC members for their continued support of the college's educational pursuits. Ferreyra also recognized some of the stellar students in attendance, including LSU Truman Scholar Catherine Fontenot and Goldwater Scholar Bruno Beltran.

The speaker for the evening was Prosanta Chakrabarty, assistant professor of biological sciences and curator of ichthyology for the LSU Museum of Natural Science. Chakrabarty shared his experiences exploring the waters of Australia in search of blind cavefishes and fishing the waters of Singapore, the Dominican Republic, the Yucatan Peninsula, Taiwan, and a host of other interesting sites throughout the world.

Alumni Share Experiences During Medical Careers Night

Dean's Circle (DC) members and LSU alumni offered students valuable insight into the preparation needed to pursue careers in medicine during the College of Science's Medical Careers Night October 10 in Evangeline Hall. The panelists included DC members and LSU alumni Mary Neal, a retired obstetrician named one of the "Top Docs" by *Max Monthly* magazine in 2007; Mel Triay, a board certified anesthesiologist with 29 years experience; and Jim Lange, an accomplished research scientist with the Centers for Disease Control. The alumni discussed their careers, how they came to choose their fields of interest, and answered questions from the more than 40 Science Residential College students in attendance. The students also had an opportunity to network with the alumni one on one during dinner.

Support Research and Scholarship at LSU

The Dean's Circle (DC) is a loyal group of alumni and friends who share a passion for advancing scholarship and research at LSU. DC members are playing an ever-increasing role in supporting the college's *Formula for Excellence* Strategic Plan. Our DC provides the critical link needed to fund pursuits of the College including, but not limited to:

- scholarships for first-time freshmen to attend pre-college boot camps,
- student organizations and educational travel expenses,
- faculty recruitment and recognition activities, and
- development initiatives that build alumni and community relations.

Dean's Circle membership recognizes the generosity of alumni and friends who make annual gifts of \$1,000 or more to the Science Development Fund. Members enjoy invitations to events hosted by the college, including the annual Dean's Circle Dinner and Hall of Distinction Ceremony, special communications from the dean throughout the year, and opportunities to meet and network with college leadership and other members.

To join by mail, make your check payable to "LSU Foundation-Science Dean's Circle" and mail your check to: LSU Foundation, 3838 West Lakeshore Drive, Baton Rouge, LA 70808

To donate online go to www.lsufoundation.org/give-to-science.
