202 NICHOLSON HALL
Louisiana State University
Baton Rouge, Louisiana 70803-4001

WEEKLY CALENDAR

October 15-19, 2012

Saturday Science

"We are all Stardust: The origin of elements in the cauldrons of the cosmos"

10:00 – 11:15 AM, Saturday, October 20, 2012
130 Nicholson Hall

Catherine Deibel
LSU – Department of Physics and Astronomy

Host: Parampreet Singh

LASiGMA Seminar:

"Neutron Scattering at the Spallation Neutron Source and the High-Flux Isotope Reactor in Oak Ridge National Laboratory"

Dr. Jaime Fernandez-Baca, ORNL
3:30 p.m. Wednesday, October 17, 2012
Johnston Hall, Room 338

Abstract: Neutrons have unique properties that make them an ideal probe of condensed matter systems. They have wavelengths and energies comparable to the typical atomic distances and collective excitations in solids, making them suitable to study the crystalline structures and the dynamics of materials. They have no electric charge which gives them the ability to penetrate to the bulk of most materials. Neutrons also have a magnetic moment which makes them very useful to study the magnetic structures and magnetic excitations in magnetic materials. Unlike x-rays neutrons are very sensitive to study light elements and this makes them an useful probe of biological materials. In this talk I will present the history of neutron scattering and describe the properties that make neutrons unique to study materials. I will also present examples of recent research in the study novel materials and discuss the opportunities of scientific research, mentoring and training at two major scientific user facilities in the US: the Spallation Neutron Source (SNS) and the High Flux Isotope Reactor (HFIR) at Oak Ridge National Laboratory. The SNS is the world's most intense pulsed accelerator-based neutron source; the HFIR is the highest flux reactor-based neutron source for condensed matter research in the United States.

Condensed Matter seminar:

"Study of multiferroic materials using neutron scattering"

Dr. Jaime Fernandez-Baca, ORNL
10:30 a.m. Thursday, October 18, 2012
Nicholson Hall, Room 435

Dr. Jaime Fernandez-Baca is a Senior Research Staff Member in Oak Ridge National Laboratory's Quantum Condensed Matter Division. He has over 25 years of experience in the study of the magnetic ordering and spin dynamics of complex oxides and related alloys utilizing neutron scattering techniques. His most recent interest is in the study of colossal magnetoresistive oxides and multiferroic materials.
