202 NICHOLSON HALL
Louisiana State University
Baton Rouge, Louisiana 70803-4001

WEEKLY CALENDAR

November 7, 2011

Departmental Colloquium

Thursday, 3:40 PM, November 10, 2011
109 Nicholson Hall

"Pushing Einstein's Boundaries: Gravitational Approaches to the Challenges of Modern Cosmology"

Mark Trodden
University of Pennsylvania

Host: Parampreet Singh and Jorge Pullin

• Refreshments served at 3:15 PM in 232 (Library) Nicholson Hall •

Einstein's general theory of relativity (GR) is one of the most successful and well-tested physical theories ever developed. Nevertheless, modern cosmology poses a range of questions, from the smallest scales to the largest, that remain currently unresolved by GR coupled to the known energy and matter contents of the universe. This raises the logical possibility that GR may require modification on the relevant scales. I will discuss the status of some modern approaches to alter GR to address cosmological problems. We shall see that these efforts are extremely theoretically constrained, leaving very few currently viable approaches. Meanwhile, observationally, upcoming missions promise to constrain allowed departures from GR in exciting new ways, complementary to traditional tests within the solar system.
