WEEKLY CALENDAR

September 16 - 17, 2013

DEPARTMENTAL COLLOQUIUM

"X-ray Bursts, Palladium Oceans, and Cold Fusion – The Strange World of Accreting Neutron Stars"

3:30 PM September 19, 2013 109 Nicholson Hall

Hendrik Schatz

Michigan State University and JINA

Host: Jeffery Blackmon/Catherine Deibel

• Refreshments served at 3:10 PM in 232 (Library) Nicholson Hall •

Accreting neutron stars are bright astronomical X-ray sources that show a wide range of nuclear physics driven phenomena. The multitude of observables make them prime laboratories to study thermonuclear explosions and the properties of matter at extreme densities. Rare isotopes play a central role in the underlying nuclear reaction sequences and range from the most neutron deficient to the most neutron rich rare isotope created in nature. Despite of the short terrestrial lifetimes of these isotopes of typically milli-seconds, their properties shape the key observables. I will review recent progress in astronomy, in the theoretical understanding of the nuclear processes, and in attempts to experimentally produce and study the relevant rare isotopes in accelerator laboratories.
