"Muon neutrino to electron neutrino oscillations in the MINOS experiment"

Lisa Whitehead
Brookhaven National Laboratory

Host: Thoms Kutter

MINOS is a long-baseline neutrino oscillation experiment situated along Fermilab's high-intensity NuMI neutrino beam. MINOS has completed a search for muon neutrino to electron neutrino transitions, observation of which would indicate a non-zero value for the neutrino mixing angle \( \theta_{13} \). After an introduction to neutrino oscillations and the MINOS experiment, the newest result and its implication will be presented.
