⁷M. G. Olsson and Leaf Turner, Phys. Rev. 181, 2141 (1969).

⁸The small additive constants in Eq. (3) are due to the non-pion-pole contributions to the production amplitude.

⁹ $\pi^-p \rightarrow \pi^- \pi^+ n$: $T_\pi = 210, 222$ MeV, Yu. A. Batusov

et al., Yad. Fiz. 1, 687 (1965) [Sov. J. Nucl. Phys. 1, 492 (1965)]. $\pi^+p \rightarrow \pi^+ \pi^+ n$: $T_\pi = 230$ MeV, Yu. A. Batusov *et al.*, Yad. Fiz. 18, 86 (1973) [Sov. J. Nucl. Phys. 18, 45 (1974)]; $T_\pi = 357$ MeV, J. Kirz *et al.*, Phys. Rev. 126, 763 (1962).

$\pi^-p \rightarrow \pi^0 \pi^0 n$: $T_\pi = 276$ MeV, A. V. Kravtsov *et al.*, Yad. Fiz. 20, 942 (1974) [Sov. J. Nucl. Phys. 20, 500 (1975)].

¹⁰D. Morgan and G. Shaw, Phys. Rev. D 2, 520 (1970), and Nucl. Phys. B10, 261 (1969).

¹¹Current algebra also makes a unique prediction for this combination; S. Weinberg, Phys. Rev. Lett. 17, 616 (1966). With the choice $f_\pi = 94$ MeV we find $2a_0 - 5a_2 = 0.52$.

¹²The results quoted are independent of the value of f_π since the pion-pole term of the production amplitude factors into π - π scattering lengths and the known $NN\pi$ vertex.

ERRATA

TWO-DIMENSIONAL CHARACTER OF THE CONDUCTION BANDS OF *d*-BAND PEROVSKITES. T. Wolfram [Phys. Rev. Lett. 29, 1383 (1972)].

Equations (2) should read

$$\begin{aligned} G(E) &= (\xi/\pi) |E - \frac{1}{2}(E_t + E_L)| K(\xi) / (pd\pi)^2, \\ \xi &= 4/\zeta, \\ \zeta &= [(E - E_t)(E - E_L) - 4(pd\pi)^2] / (pd\pi)^2. \end{aligned} \quad (2)$$

CONTACT INTERACTIONS IN THE EINSTEIN AND EINSTEIN-CARTAN-SCIAMA-KIBBLE (ECSK) THEORIES OF GRAVITATION. R. F. O'Connell [Phys. Rev. Lett. 37, 1653 (1976)].

The following typographical errors should be noted: In the sentence containing Eq. (2), the symbols $\Delta S_E^{(1)}$ and t_c should be replaced by $\Delta \mathcal{L}_E^{(1)}$ and λ_c , respectively. Every summation sign which appears should have an upper limit n .

On the right-hand side of Eq. (12), one should replace the 3 by a 2 and λ_c by λ_c^2 . In Ref. 1, the year 1972 should be replaced by 1922. Reference 2 should read "D. W. Sciama, in ... 1962), p. 415." In Eq. (10), $\delta(\vec{r} - \vec{r}_b)$ should be replaced by $\delta(\vec{r}_a - \vec{r}_b)$.

Lagrangians and Lagrangian densities should have been denoted by L and \mathcal{L} , respectively, whereas \mathcal{L} has been used to denote both quantities. Thus, it should be noted that only Eqs. (1) and (7) treat Lagrangian densities and that, in particular, Eq. (10) is obtained by integrating Eq. (7) over all space.

RADIATION-INDUCED DIFFUSION OF HYDROGEN AND DEUTERIUM IN MgO. Y. Chen, M. M. Abraham, and H. T. Tohver [Phys. Rev. Lett. 37, 1757 (1976)].

On page 1759, column 1, line 11, "... the relationship $\sigma = (1/\Delta N/N)/\Delta\varphi \dots$ " should read "... the relationship $\sigma = (\Delta N/N)/\Delta\varphi \dots$ "
