

Important tips for the 1st-exam:

- 1. There are 16 questions, half concept (multiple choice) and half problem solving.**
- 2. For the problems:**
 - * Enter only numbers. The units are provided.**
 - * DO NOT use scientific notation in entering your answer. The system does not reliably handle scientific notation.**
For example, DO NOT enter 9.1e5, instead enter 910000.
- 3. We have used sensible units so that your answer should not be extremely large or small. (i. g., cannot be like 1×10^{-11} or 1×10^{11})**
- 4. Enter all answers to 2 significant digits.**
